

Cabochon standard sizes and shapes

These actual-size images (in millimeters) represent common sizes in the major cabochon shapes. You can print and cut these images and use them in creating your own designs; be sure to set your printer for "actual size" printing. Shapes with pointed corners (navettes, teardrops, squares, triangles) may have sharp or soft points. When bezelling a stone, rough out your design using these sizes, then use the actual cabochons to refine the shape of the bezel's initial ring

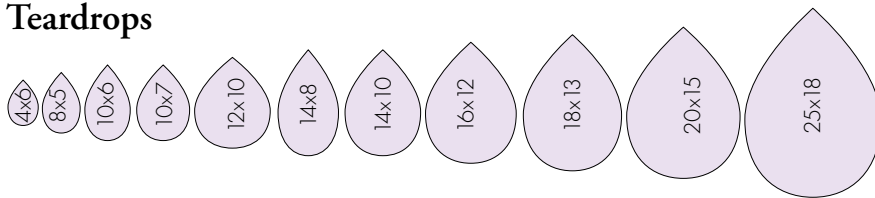

Rounds

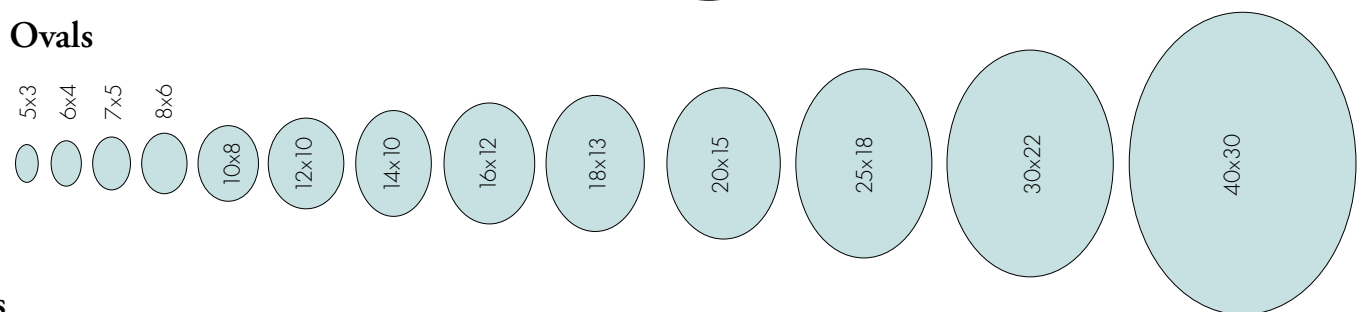

Navettes

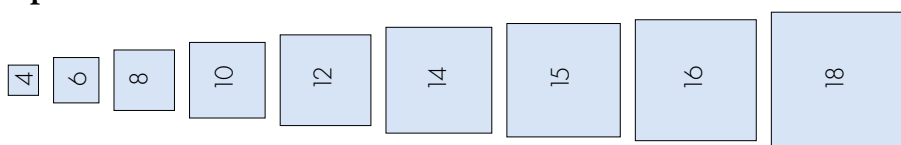

Teardrops

Ovals

Squares

Triangles
